

Tabs Block

A tabbed container that organizes content into switchable panels. Each tab is a title + body pair.

Authoring Criteria

- Tab title – required. The label shown on the tab. One per tab.
- Tab body (rich text) – required. The content displayed when the tab is active. One per tab.
- Author can add as many title + body pairs as needed. Each pair renders as one tab.

Development Requirements

The tabs block must be built to support the following content types within tab panels:

- Cards
- Table
- Columns
- Videos
- Product Lists
- Images

Each layout will need to render correctly inside a tab body without conflict with the parent tabs block styling or behavior.

On mobile devices, the tabbed interface will collapse into an accordion layout for better usability.

Step 5

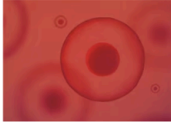

Fragment generationCloningTransformationPlasmid preparationConstruct analysis

Select from a variety of reagents and instruments to generate your fragment of interest from DNA, RNA, or synthetic fragments.

PCR Enzymes & Reagents

PCR enzymes for genotyping and routine PCR. Characterized by high fidelity and high specificity, these enzymes are suitable for amplifying long fragments and GC-rich templates.

Reverse Transcription

Reverse transcriptase synthesizes cDNA from single-stranded RNA and serves as a template for PCR amplification. Explore our [selection tool](#) to find the right reverse transcriptase for your experiment.

Oligonucleotides

Custom DNA Oligos Synthetic Services provide oligos in a variety of scales, formats, modifications, and purifications. Use our easy ordering portal for oligos that meet your cloning needs.
